

MESSAGE TO THE PUBLIC: PROTECT YOUR TRASH & RECYCLING WORKERS FROM COVID-19

1. Fit all trash and recycling **completely inside** your containers with closed lids to prevent your hauler from physically touching waste.
2. Securely **tie closed all trash bags** in your garbage bin to prevent spillover.
3. Keep **all recyclables loose** in your recycling bin to prevent your hauler or recycling team from having to rip open any bags.
4. Recycle **ONLY items from the yes list** to prevent the recycling team from having to touch any "No" item to pull it out (www.millenniumrecycling.com/singlestream)
5. Maintain **appropriate distance** from your hauler.
6. **Wipe down** the handles and lids of your carts, especially if you're sick.
7. Bring your bins **out to the curb**. If your hauler uses an automatic arm on their truck, space bins at least 6 ft apart so they can be picked up without touching them by hand.
8. **No plastic bags or tissues in the recycling!**
